

### Job description

Our company is currently recruiting a junior or skilled technician. This role encompasses planning, installing, repairing, maintaining, and optimizing electrical systems utilizing programmable logic controllers (PLCs), variable speed drives (VSDs), remote terminal units (RTUs), and other equipment. The primary focus will be on the electrical design of the MCC's, PLC software development and commissioning the plants on site.

### Key Responsibilities:

- PLC programming to ensure efficient and reliable operation of automated systems.
- Diagnose and troubleshoot electrical and PLC-related issues.
- Design MCC's and control panels
- Manage projects (site and workshop)
- Ensure that all work is performed in accordance with local and national electrical codes and regulations.
- Maintain accurate records of all work performed.
- Communicate effectively with customers and other team members.

### Qualifications:

- Minimum qualification: Engineering (Electrical or Mechatronic)
- Proven experience (Prior to studies/Vacation work)
- Ability to use electrical testing equipment and hand tools
- Excellent problem-solving and analytical skills
- Strong communication, attention to detail and interpersonal skills
- Ability to work independently and in a team environment.

Pay: Depending on experience

Job Type: Full-time

### License/Certification:

- Drivers license (Required)

### Willingness to travel:

- 25% (Preferred) (Local and international - Zambia, Mozambique etc)
