

**THERMODYNAMICS
FLUIDS & DESIGN**

Job Opportunity

Mechanical Engineer

General Summary

The position will report to the directors of the company. The key responsibilities of the position include the design, build, test and commissioning of custom machines for our customers. The focus will be in the fields of design, heat transfer, fluid mechanics and thermodynamics.

TF Design is a turn-key engineering service provider specializing in mechatronic systems from conceptual design to fabrication and commissioning.

You will learn:

- Design
- Systems engineering
- Project execution
- Manufacturing
- Commercial skills

Requirements:

- Bachelors or Masters degree in Mechanical or Mechatronic engineering.
- Valid Driver's licence.
- Communicate well in English & Afrikaans.
- Previous work experience is not required.

Personal Attributes:

If your interests align with the attributes below, then you are likely a good candidate for this position.

- Eager to learn.
- Keen interest in mechanical design (If you disassembled stuff as a kid, you are the right guy, helps if you grew up on the farm or fixed cars)
- Enjoy designing new things
- Must be stress tolerant and able to communicate clearly to a team
- Willing to travel

**Please email your CV and full academic record before
2026/03/30**
