Vacancy – Mechatronics Engineer Intern

Drone Star is currently looking for a candidate engineer for an internship position to design multirole autonomous multi-copter drones. Candidates will be part of multiple phases of the development of the products including design, manufacture, assembly and testing.

The successful candidate should ideally have:

- excellent problem-solving skills
- excellent proficiency with CAD (ideally including surface modelling)
- a good understanding of sensors, electronics design and electronic communication protocols
- experience with programming (C++ and Python)

Any previous experience with drone design, robotics and **piloting drones** is advantageous.

What we offer:

- weekly remuneration at a daily rate (determined by candidate's qualifications)
- interesting design challenges - providing growth and experience to young engineers
- opportunity to grow into a tailored role within the company as it expands

Remuneration will be discussed once application is successful

To apply, please send your application (CV, cover letter and any other supporting documents to info@dronestar.co.za).

We look forward to you joining our team!
